

AMERICAN TECHNOLOGIES, INC.

Residential Fire Damage

PROJECT PROFILE

Type of job: Emergency services, reconstruction

Client: Private residence

▲ BEFORE

▲ AFTER

Situation

A fire in a residential garage quickly spread to the home. Both structures suffered significant damage and required reconstruction of half the original space. While most of the home's contents were lost, some items deemed salvageable were packed out for cleaning and restoration.

ATI Services

- Emergency services including board-up and securing the perimeter of the property
- Temporary power
- Debris removal
- Contents pack-out, storage and pack-back
- Contents cleaning and restoration
- Structure cleaning and deodorizing
- Reconstruction

The ATI Advantage

ATI provided all work necessary for this recovery, from initial emergency services through final reconstruction.

- Mobilized personnel to the site within two hours of the fire to secure the property.
- Provided temporary power to avoid delays in initial recovery work.
- Engaged specialty cleaning and restoration experts to inspect damaged high-end items including paintings and a piano.
- Used state-of-the-art techniques including sodium bicarbonate blasting and thermal fogging to clean and deodorize the structure.

- Thanks to ATI's full-service construction division, the job transitioned seamlessly from the emergency services phase to reconstruction, saving the homeowners valuable time and expense in hiring additional vendors.
- Successfully worked with the city to resolve difficult permitting issues to keep the reconstruction phase on track and on time.

Results

ATI personnel are keenly aware of the human side of a loss, particularly when disaster strikes a private residence. For each job, the goal goes beyond providing recovery services for the structure. ATI is committed to offering additional support to property owners through the first traumatic hours and days following the disaster.

ATI crews went the extra mile for this family, beginning on the night of the fire. A project manager arrived on site within two hours of the fire to ensure that the damaged property was properly secured prior to beginning emergency services. While at the site that night, the project manager provided the family, who suddenly found themselves displaced, with transportation to a local drugstore to purchase essentials and then to a local hotel.

ATI crew members also helped the family with the sad task of retrieving beloved pets from the site that did not survive the fire. And although a contents assessor determined that the home's contents were a total loss, ATI crew members continued to sift carefully through the burnt-out structure and debris. To the homeowners' amazement, the crew managed to find a few cherished family items that they packed out for cleaning and deodorizing.

During the reconstruction phase, ATI construction specialists again took extra steps to ensure a smooth process for the homeowners. This included successfully negotiating with the city over a permitting issue that could have potentially slowed the reconstruction phase significantly. In addition, ATI's construction supervisor on the job worked closely with the homeowners to accommodate their special requests while keeping within the family's budget requirements.

This loss was clearly a traumatic event for the homeowners and their children. But thanks to a crew of seasoned and caring specialists, ATI completed the recovery – from emergency services through final reconstruction – a full two months ahead of schedule.

"We've been here for over a month now, and we love the house that rose from the ashes. I would recommend ATI wholeheartedly to anyone. ATI has served us well. Thank you."

*Casceil M. Aronson
Homeowner*
