Setting the Standards

ATI is trusted by Healthcare professionals nationwide to deal effectively with infectious disease control, including the COVID-19 virus. Our experience comes from years of providing embedded staff in hospitals, supplying decontamination and isolation support. As a result, our response to the COVID-19 pandemic was not an afterthought but rather a proficiency based on training and experience.

Working with clients in a vast array of market segments, ATI assesses their unique needs and limitations to create a customized approach for each facility. With rapid response during emergency situations, state-of-the-art methodology and highly trained and certified teams, ATI has led the charge in establishing standard operating procedures to combat this new virus.

Means, Methods & Technology

Beyond the thoroughness of hand-cleaning high touch surfaces, ATI also utilizes cutting edge technology in its decontamination process.

Electrostatic Sprayers: Spray an electrostatically charged mist onto surfaces and objects using a specialized solution. It is a cost-effective and rapid method for combating the COVID-19 virus.

Ultraviolet Germicidal Irradiation (UVGI): The UVGI Room Sanitizer unit is specifically designed for disinfection of bacteria, viruses and fungi on exposed surfaces.

Fogging Machines: These machines use large volumes of air at low pressures to transform liquid into droplets that are dispersed into the atmosphere. They are extremely efficient in killing viruses.

CDC-Approved & Sustainable Solutions

ATI only uses CDC-approved disinfection products and our crews are trained in the safe application of these chemicals. Our disinfecting products and application procedures are vetted by scientific health professionals. Further, our CDC-approved products are environmentally friendly and sustainable.

Health & Safety

ATI is an Essential Service Provider operating within multiple Critical Infrastructure Sectors. As such, ATI is given preferential access by major suppliers to the most effective Personal Protective Equipment (PPE) as required by the most extreme environments. In addition, our crews are instructed to practice the donning of PPE, as well as social distancing and isolation, both to and from the client site. For confirmed COVID-19 cases, ATI treats all waste as biohazardous, regulated medical waste in accordance with regulatory requirements.

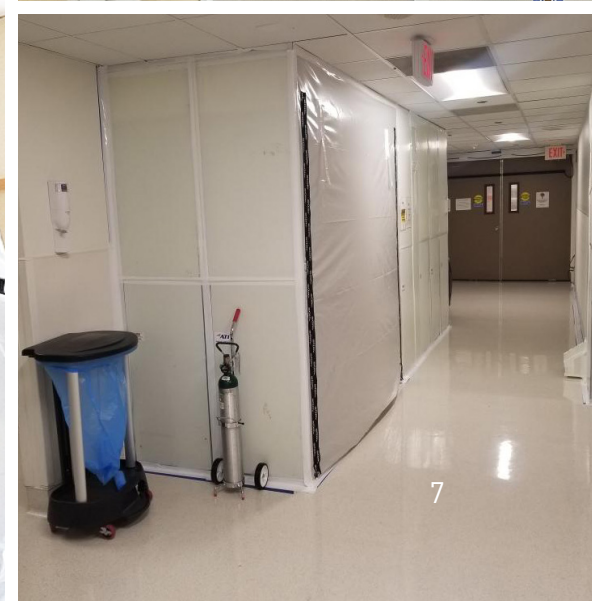

These measures help to ensure the health and safety of our clients' staff, customers and guests.
